

## Neuropsychology Services

Our staff of clinical neuropsychologists are licensed psychologists with expertise in how behavior and thinking are related to brain structures and systems. We evaluate brain function of adult and pediatric patients by using non-invasive, norm referenced, standardized tests of cognition, memory and thinking skills, and then use this information to assist with developing a personalized treatment plan. These assessments typically involve paper and pencil tests.

Your patients can be reassured that these tests cannot be passed or failed. The goal of the assessment is to get a measure of how they perform relative to their peer group (people of the same age, gender, and education level).

### Patients are typically referred for evaluation to:

- Identify and define problems with brain functioning
- Provide a profile of strengths and challenges to guide rehabilitation, educational, vocational, or other services
- Document changes in brain functioning over time
- Confirm or clarify a diagnosis
- Assess cognitive and thinking skills
- Complete pre-surgical evaluation (epilepsy, deep brain stimulation, neuro-oncology)
- Provide recommendations for treatment or specialized services, such as cognitive rehabilitation, medical specialists, physical/occupational/speech therapy, mental health, or vocational rehabilitation

### We serve adult and pediatric patients experiencing:

- Traumatic Brain Injury/Concussion
- Stroke/Cerebrovascular disease
- Parkinson disease/Movement Disorder
- Hematology/Oncology (i.e., brain tumor, leukemia, sickle cell disease)
- Epilepsy/Seizures
- Mild Cognitive Impairment/ Memory disorders/Dementia
- Multiple Sclerosis
- Genetic Disorders
- Neurodevelopmental disabilities
- Systemic diseases affecting the brain or central nervous system

Note: A prescription from a Florida licensed MD or ARNP is required prior to scheduling neuropsychological services. TGH accepts most insurance plans.

**To make an appointment for your adult or pediatric patient, call (813) 844-7719, or fax the prescription along with an appointment request to (813) 844-1948.**
